Do you have a project?

We create your bespoke products,
in a short period of time.

Please contact us for a personalised technical assessment.

Our heat recovery units

Aware of the environmental and energy challenges ahead, we offer solutions for optimising heat recovery in line with sustainable development and eco-design principles.

We offer a wide range of recovery technologies that enable energy to be recovered from air, fumes, steam and any industrial fluid, even in highly demanding installation or operating conditions:

- Temperatures up to 1000°C (laser-welded plate heat exchangers)
- Maximum pressure 50 bar (stainless steel coils)
- Highly corrosive environments (316Ti stainless steel, titanium and plastic heat exchangers)
